THE MIDWEST IMPLANT INSTITUTE

602: Digging Out of Problems

July 30-31: 14 CE Credits

- Bring your problem cases to discuss -

MII Faculty

Dr. Duke Heller - Dr. Rob Heller - MII Fellows

- No matter what your level of competence in implant dentistry – You will face challenges in 2010 -

Lecture Topics:

- Handling loose screws
- Handling broken screws
- When to repair an implant that has lost bone support
- When to remove an implant that has lost bone support
- Identifying failed implants that can not be repaired
- Removing an implant with minimal bone loss
- Which bone grafting materials to use in implant repair
- Which tissue barriers to use in implant repair
- When to remove a compromised tooth and replace with an implant
- When to do socket preservation without immediate implant placement
- When to do an extraction of a compromised tooth with immediate implant placement and temporization of lost tooth area
- Challenging discussion strategies:
Informing your patient that he/she is going to lose an implant
- When and how to charge for implant failure
- Where to go to ask questions about a problem or challenge

Why this Digging Out of Problems Course is needed:

- We all have patients that seem to have more problems than other patients
- We all need a source to ask questions about implant fixture failure as well as implant prosthetic problems
- There is comfort in knowing that others have implant failures
- We can always learn from other's problems.....if they will share with us

Tuition:
\$2600 Doctors - \$275 Assistants - \$1500 MII Fellows or Previous Attendees
